Allianz Trade API

Online services connecting credit insurance
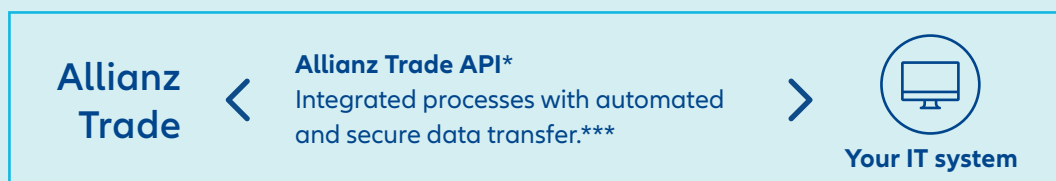

What is Allianz Trade API?

Allianz Trade API* enables credit insurance solutions to be integrated into your company's systems and automated processes.

All integrated within your system!

Allianz Trade API adapts to fit your company's specific needs

It is designed for companies that manage hundreds of credit limits as part of their business operations. Allianz Trade API complements your credit insurance policy** and makes it easier and faster for your business to receive our support for your credit management activities.

Allianz Trade < **Allianz Trade API***
Integrated processes with automated and secure data transfer.*** > **Your IT system**

How does Allianz Trade API help your business succeed?

With Allianz Trade API, your business receives real-time information from us directly within your credit management system. It provides your company automatic access to our knowledge, which you can use to make important credit decisions about your customers. By using Allianz Trade API, all of your core exchanges with us can be streamlined and managed right from your credit management system. You will noticeably reduce the time and effort of manually entering information.

SIMPLIFICATION
Simplify and automate your credit management processes

Allianz Trade API enables you to automate the standard requests and interactions you have with us within one unique tool: your IT system. This saves time as well as manual effort and allows you to focus on growing your business.

ACCURACY
Receive important credit information in real time

Once we have new information about one of your customers or prospects, it is automatically integrated into your credit management system thereby increasing the accuracy of your analysis.

SPEED
Provide quicker responses to your customers

Allianz Trade API gives you the information you need to immediately react to customer inquiries. This can lead to a valuable advantage, compared to your competitors who may rely on more time-consuming credit management processes.

PROACTIVITY
Manage your company's risks proactively

Allianz Trade API provides your risk managers with complete transparency and insight about your company's credit risks along with enhanced reporting and alerting capabilities.

* Application Programming Interface
** Without changing nor overriding the terms and conditions of your policy
*** Requires IT-development

Allianz Trade is the trademark used to designate a range of services provided by Euler Hermes.

BENEFIT TO CUSTOMERS

The integration of Allianz Trade API has been pivotal in improving our customer's trade credit insurance management, reducing the effort and time spent. Before the integration of our APIs, they had to create the customer in their ERP system, search for the new customer in our online platform, request a credit limit, monitor it and feed the information back into the ERP system for local teams to then process accordingly. After the integration this was all possible within their ERP system without switching systems. An additional benefit is the reduced error-proneness, as the systems communicate directly.

Manage your credit insurance policy from your own system

1. New customer
Your business receives an inquiry for a new customer.

2. Company search
Using Allianz Trade API, you can find your customer from our global database.

3. Cover request
You apply for credit insurance cover and then view our response.

4. Immediate answer
You set up the customer's payment terms and method based on our response.

What is the Allianz API implementation process?

Allianz Trade API can be implemented with your company's credit management system whether your company uses its own proprietary system or any another provider, such as SAP®, Oracle®, or Microsoft®.
The implementation process should be started from our developer portal: developers.allianz-trade.com.
We have a well-trained, knowledgeable team that can answer all your questions and help you ensuring a smooth implementation. After the implementation of Allianz Trade API, our consultant will continue to provide you with dedicated support.

High level of security

Allianz Trade API is a JSON-based REST API and uses OAuth2 protocol to establish a direct and secure link between your IT system and us.
All of your information is optimally encrypted using Transport Secure Layer (TLS) technology. Forgery-proof authentication with Allianz Trade API is another guarantee that data exchange only takes place with us.

You can set up automatic preconfigured reports to support the management and steering of your global risk portfolio such as:

- Report of expired time limits
- Report on new and increased credit limit request
- Report on credit insured customer overview

You can also set up alerts such as:

- Actual outstanding invoices are exceeding the cover
- New credit limit requests to be made
- Actual outstanding invoices are lower than the cover

Depending on your business and the requirements of your organisation, we will offer advice on which alerts should be automated and how often limit requests should be made.
